

P-F50

CEMENTING SERVICE BULLETIN

05/27/10

P-F50 is a powdered Low to High Temperature Fluid-Loss additive designed for use from 70⁰F to 500⁰F and is generally used in concentrations between 0.2% To 1.0% BWOC of which can either be dry blended with the cement or pre mixed in the mix water.

This information is provided as a general guide only and is not meant as an absolute result to be expected. All designs are to be performed in the laboratory with the actual cement, additives and rig site water before pumping into the well. Petrochem General Terms and conditions as seen on our web site provide details of above.
